EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Michael A. DeSanctis on 3/21/07.

The application has been amended as follows:

12. (Amended) A system for communications over the Internet, comprising:
a plurality of routers, each router connectable to at least one user terminal;
a plurality of Internet protocol service switches (IPSXs), each IPSX is connectable to at least one of the plurality of routers and comprises:

a subscriber virtual frame relay switch (VS) connectable to the at least one of the plurality of routers and configured to facilitate secure communication of frame relay messages from the first user terminal to a second user terminal over the Internet by encapsulating frame relay header and payload information of the frame relay messages within a payload transport protocol and encrypting and authenticating all packets of the payload transport protocol; and

a virtual router (VR) to connect the VS to the Internet via a firewall and an Internet Protocol Security (IPSec) module for secure frame relay communications between the user terminals associated with each of the routers over the Internet.

35. (Currently amended) A system for communications over the Internet, comprising:

a plurality of routers, each router connectable to at least one user terminal; a plurality of frame relay over Internet Protocol (FOIP) switches, each FOIP switch is connectable to at least one of the plurality of routers and comprises:

a subscriber virtual frame relay switch (VS) connectable to the at least one of the plurality of routers and configured to facilitate secure communication of frame relay messages from the first user terminal to a second user terminal over the Internet by encapsulating frame relay header and payload information of the frame relay messages within a payload transport protocol and encrypting and authenticating all packets of the payload transport protocol; and

a virtual router (VR) to connect the VS to the Internet via a firewall and an Internet Protocol Security (IPSec) module for secure frame relay communications between the user terminals associated with each of the routers over the Internet.
